# Improve and accelerate your product designs with the Adobe Substance 3D Collection.

Bring better products to market faster than ever.

Unlock new efficiency in your workflow.

- **Create photorealistic product visualizations at all stages of product design with the Substance 3D Collection.** Enjoy streamlined compatibility with the most common 3D tools and file formats used in product design.

- **Experience intuitive workflows.** Take advantage of powerful integrations with the Adobe Creative Cloud tools you rely on each day.

- **Enjoy more time for creative iteration.** Create space to think big again with photorealistic visualization and prototypes that are quick to produce and easy to edit.

- **Finalize your design faster.** Make review cycles more efficient and accurate through high-quality, photorealistic visualizations of products from initial concept to prototyping, reducing delays associated with creating physical prototypes.

Achieve new levels of realism and control.

- **Experiment in detail.** Bring your designs to life with ready-to-use professional 3D assets, including an extensive library of photorealistic textures and materials, or import your own from the real world with easy-to-use AI tools.

- **Create pixel-perfect, photorealistic visualizations.** Fine-tune every detail, from surface type to its exact roughness, opacity, shine, and more.

- **Evaluate your concepts in context.** Quickly compose photorealistic settings for staging and viewing your designs.

- **Maintain visual consistency from concept to approval.** Take advantage of parametric materials that appear the same across design applications.

Boost collaboration across design, engineering, and marketing teams.

Product visualizations powered by Substance 3D allow teams to share and utilize virtual versions of products before manufacturing has even begun.

- **Accelerate the feedback and review cycle.** Adjust designs based on feedback in real time—all while efficiently sharing and exporting assets.

- **Reduce duplication of work.** Share 3D assets and material libraries across creative teams.

- **Guarantee accurate visuals.** Maintain visual consistency from concept to approval with parametric materials that look the same across design applications.

- **Accurately implement designs.** Send parameters like physical size and proportion across applications so patterns appear exactly the right size on designed apparel.

Give your design the best chance of business success.

- **Give your marketing team a head start.** Equip them with high-fidelity, photorealistic 3D assets they can build imagery around the moment manufacturing starts.

- **Create compelling visuals at scale.** Replace long, repetitive workflows for creating product imagery with flexible 3D pipelines that support quick iteration and adaptation.

- **Reduce time to market.** Speed ahead of the competition and react quicker to trends with an overall more efficient product design process.

- **Ensure a better final product.** Harness the potential of hyper-realistic 3D visualization to review and refine your product at every stage of design, resulting in the best possible version landing in consumers' hands.

Reduce your organization's carbon footprint.

- **Lower production-related waste.** Reduce unnecessary physical product models with entirely digital, high-fidelity 3D mockups.

- **Cut back on your product's carbon footprint.** Decrease emissions related to travel, physical sets, props, and equipment associated with in-person photoshoots—replacing them instead with "virtual photoshoots."

Get winning designs into consumers' hands faster with the Substance 3D Collection.

The Substance 3D Collection is a leader in the world of industrial design, providing designers with the tools they need to unleash their creativity and bring products to market faster. With benefits ranging from time and cost savings to sustainability and streamlined workflows, it's clear that Substance is reshaping the way designers work and think about the design process. By embracing this technology, businesses can stay ahead of the curve and ensure their products stand out in an increasingly competitive market. Learn more about Adobe Substance 3D for enterprise.
